

COMPENG 2SH4 Project – Statement of Contribution

Your Group Name grenglins
Your Name Pari Singh
Your Team Member's Name Zoish Golwala

You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.
I completed iteration 1A, iteration 2A, and worked with my partner to complete iteration 0, iteration 3, and the bonus feature.
2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.
My partner completed iteration 1B, iteration 2B, and worked with me to complete iteration 0, iteration 3, and the bonus feature.
3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't. If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.
Through my experience I found collaborating with a partner helped in certain aspects. We each worked on different classes and features, which meant we were able to focus on these things individually which helped speed up the completion of the project as a whole as we were able to put all our focus onto our tasks.
However, I did find that when we collaborated on iteration 3, it was at times difficult to explain ideas or potential logic we could use as we weren't very familiar with the other person's classes (the functions included, variables, implementation, etc.). I found that this slowed us down when working on iteration 3. After realizing this we took more time to explain our class features to each other and this helped us continue further into our code implementation. We communicated well which helped the coding process.
